COMPANY

PerDormire is currently the main brand of products made by Materassificio Montalese. Present in over 40 international markets, PerDormire has acquired a leading position, and is continuing to expand in emerging markets.

The company is today one of the leading European mattress manufacturers and the first retail chain of stores specialized in good sleep. With a production unit exceeding 20,000 m², the daily output is over 3,000 mattresses.

Established in 1971, thanks to the creativity and craft traditions of the Caso family, the company has grown over the years and become a very successful business. A vast wealth of craft skills, as well as technical and technological knowledge, passed down from one generation to the next, enhanced with new and original contents, reaching the highest levels of excellence of present-day production.

MISSION

We spend about one third of our lives in bed. For this reason no detail of the design, construction and finishing of PerDormire mattresses is left to chance. Every choice, every solution, every material used go to demonstrate the desire for quality that only a company with solid handicraft roots preserves in their DNA.

To grow, improve and always offer the best, what is needed is clarity, synergism and above all respect. Respect for one's land and one's traditions, respect for one's Customers, suppliers, employees and collaborators, and respect for the environment. This value has always remained central to the Firm's activity: a solid base on which, day after day, Materassificio Montalese has built its core values.

RESEARCH AND QUALITY

The research & development department works constantly to study and design new methods and materials, with the aim to transfer the best of the technological advances to its mattresses, and exploit all of the benefits of BIO products by using essential oils obtained from vegetable seeds and soya-based materials, in order to ensure a good night's sleep in full harmony with nature.

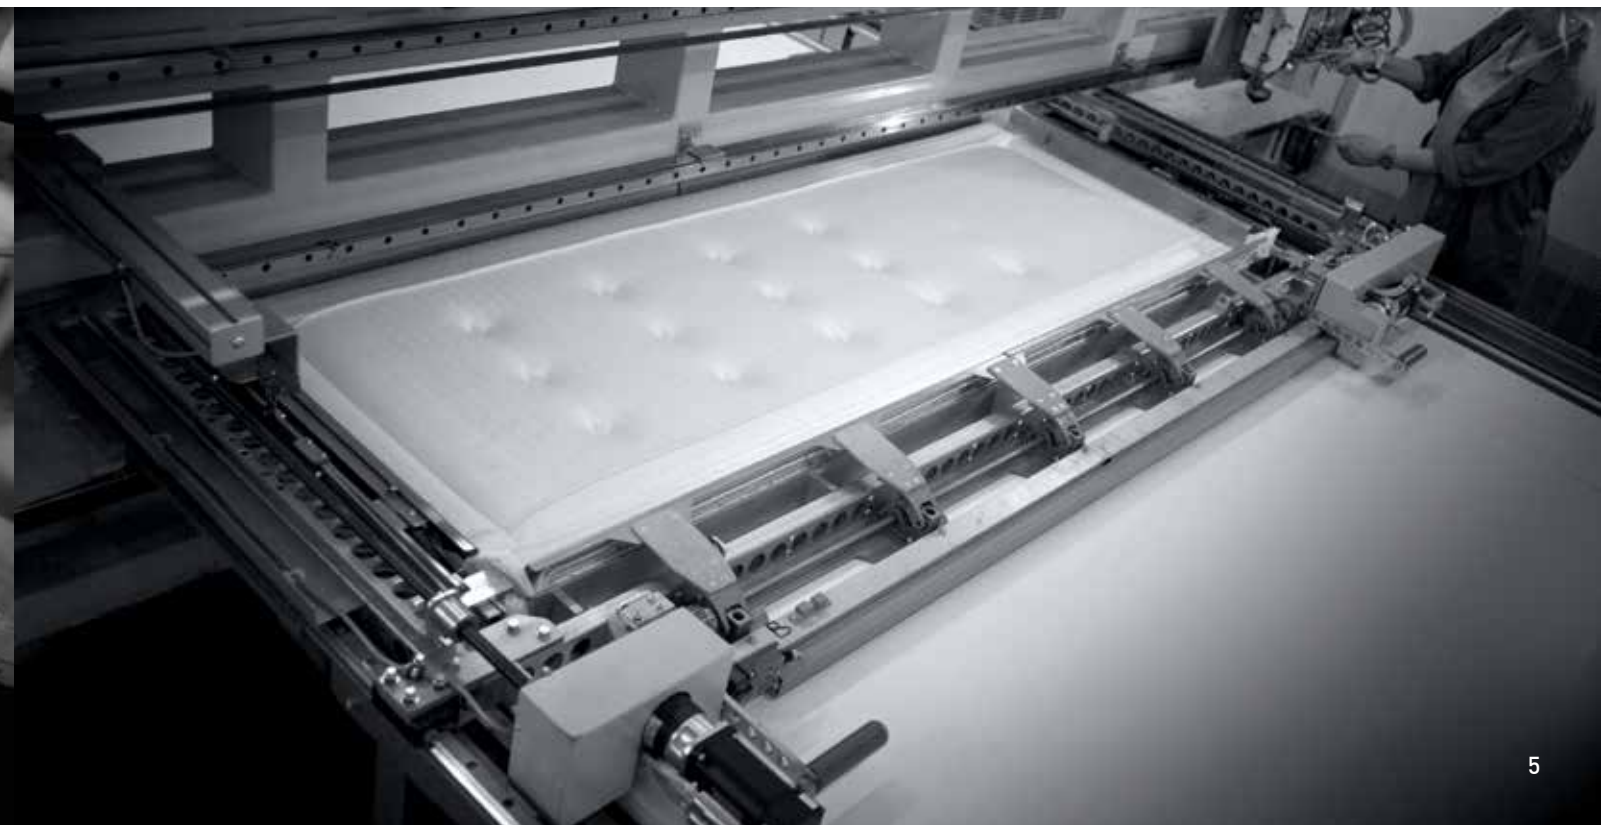

To meet the needs of each customer, Materassificio Montalese uses an innovative technology, ErgoCheck System, a specially designed measuring pad with 648 individual pressure sensors distributed across the testing surface. The system makes it possible to relieve the comfort of the product and optimize the mattresses load-bearing capacity, based on the Client's needs.

In addition to technological development, the laboratories of the company also perform conformity and durability tests on mattresses to provide Customers with the guarantee of an end product free of defects and able to stand the test of time, preserving its comfort and ergonomic qualities.

Conformity and quality certificates include the Oeko Tex Standard 100, which ensures that products do not contain or release harmful substances for human health, the 11M fireproofing certification of the Ministry of the Interior, BS (British Standard) 100 (UK) and 16 CFR 1632: 1991, 16 CFR 1633: 2006 (USA) and CATAS which, based on Italian, European and international technical regulations, drafts test reports on the safety, resistance, fire reactions and quality of all products. The company retain the Class 1 "MEDICAL DEVICE" certificates in compliance with directive 93/42/EC, and D.M. 332 of 27 August 1999. Some of the mattresses are produced by ecological materials.

100% MADE IN ITALY

To ensure the quality of 100% Italian mattresses, the company produce all mattresses in the Italian production units. Creativity, passion, originality and innovation: everything needed to succeed in markets all over the world.

THE WELLNESS CULTURE

Sleep is an active phase of daily life that is essential for the whole body's equilibrium. It ensures the gradual recovery of the mental and physical energies expended during the day.

Having an uncomfortable mattress means sleeping an average of 1 hour less than people who sleep comfortably. According to studies, over the course of a single night a person shifts position 100 times on the average. The sleeping environment and the mattress we choose for our rest may actually reduce excessive movement and the resulting micro-awakenings, and symptoms of insomnia.

In this regard, scientific research has drawn attention to the importance of choosing a good sleep system.

Not only is it important to make wiser choices, but it should be taken into account that each individual mattress component contributes to the quality of the sleep and its continuity. Experts agree: there is no perfect mattress. There is the mattress perfectly suited to individual needs. A mattress that can adapt to the body shape. A mattress that prevents the back from bending excessively and helps maintain proper posture during the night.

A mattress that knows how to make the most of the applied technologies, innovative materials and systems. A mattress that combines quality and comfort in one great promise of wellbeing.

OEKO-TEX CERTIFICATION

The polyurethane foam mattress interior and the fabric cover are certified by Oeko Tex, a worldwide consistent, independent testing and certification system.

The certification is awarded on the basis of scientific tests and certifies the absence of harmful substances.

PELMA SPA

POINTEX SPA

FABRICS

GENESI®

Genesi has a special composition, in which carbon fiber, silver and soya are combined to provide profound well-being. The carbon fiber allows the body to discharge the static electricity accumulated during the day. The extraordinary antimicrobial properties of the silver provide natural protection against microbes and bacteria. Finally, the soya provides comfort to the touch and confers an extraordinary sense of protection, like a second skin.

JACQUARD

Jacquard fabric, characterized by its typical weaving and design patterns, is a choice that favors tradition but also offers outstanding elasticity and comfort during sleep. The Jacquard Lurex cover is comfortable, elastic, fully removable and washable. Another characteristic of this fabric is to guarantee health and hygiene where it is applied.

BIOCELL
40 FUSION

This antimicrobial and antistatic fabric is composed of a special viscose fiber with the addition of a percentage of silver and carbon fiber. When the silver ions bind with the enzymes of the microbe cells, they impede activity and proliferation, thus maintaining the antimicrobial function over time. The irradiation (conservation of heat generated by the human body) and reflection (uniform distribution of the same heat toward the exterior) of the silver fiber means that Biocell Fusion is also able to regulate bodily temperature. The carbon fiber rapidly dissipates any annoying charges of static electricity that can accumulate during the night.

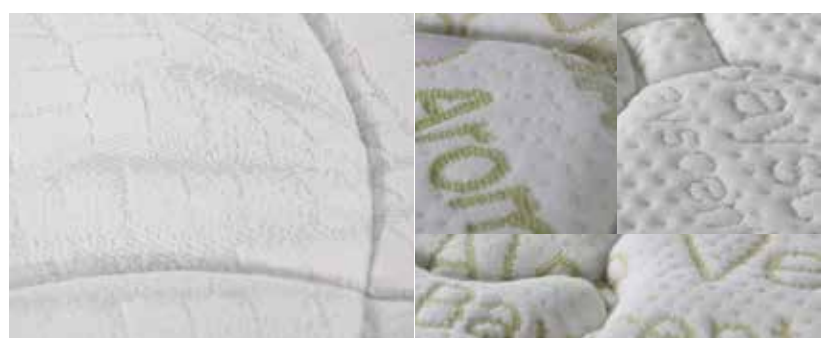

100%
ANTIALLERGIC
FIBER AND
VISCOSE

It's extremely pleasant and comfortable, in fact the touch, the softness and the brightness offer to users a natural feeling of freshness and well-being which cannot be forgotten. It absorbs humidity, it is breathable and resists wear and tear.

SCENSIC®

The Scensic® technology delivers the psychology of aromatherapy in the fabric, working on the association of a perfume with a state of mind. Studied in 3 different scents, lavender, green tea and laundry. Lavender and green tea have healing properties: indeed, their aroma, with undisputed calming and balancing properties, dissolves physical and emotional tensions, becoming a natural remedy for sleep disorders giving a total feeling of wellness. The laundry fabric, on the other hand, gives a good clean scent combined with pleasant floral notes. The special fragrances of the Scensic®, applied through the special treatment of micro-encapsulation (a unique system to apply the perfume and fix it to the tissue surfaces) are released during sleep by the movement of the body and are made available to our mind and skin.

100%
NON-ALLERGENIC
FIBER "LUREX"

Use of antiallergic fiber in padding has various positive qualities for healthy and comfortable sleeping. Mold-proof and impregnable to micro-organisms of all types, antiallergic padding offers excellent performance and is a great ally for the well-being of a good night's sleep. It is also machine washable.

SUPER SOFT
CASHMERE

Super Soft Cashmere fabric, thanks to the extraordinary effect attributable to the precious fiber for which it is named, is characterized by an exclusive softness, recognizable to the touch, that accompanies rest in a warm and gentle embrace.

TENCEL®

Tencel® fiber is of natural origin and consists of cellulose, the main part of plant cells. The raw material is wood and the production process is environmentally sustainable. The material is completely biodegradable and biological. Like all natural fibers, contact with the skin offers a sensation of softness. Comfort is guaranteed by the excellent breathability and absorption of humidity.

BAYSCENT®
AROMATHERAPY

Bayscent® microcapsules are selectively activated on the fabric to prevent the growth of the bacteria that cause unpleasant odors. Exactly the opposite of the traditional use of fragrances to cover unwanted odors, often not effective and, in any case, short-lived, the Bayscent® treatment favors the elimination of unpleasant odors and gives the fabric a pleasant clean aroma. Bayscent® treated fabric is active at three levels: it significantly lowers the vapor pressure of unpleasant odors, it neutralizes degenerative bacterial action by acting on the receptors and refreshes the environment with a delicate perfume. The treatment does not alter the original qualities of the fiber, allowing for adequate bodily transpiration during sleep.

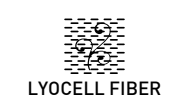

BAYSCENT®
TENCEL®

Bayscent® Tencel®: This fabric is composed by wood cellulose, a natural and regenerable raw material. Its processing results in a reduced environmental impact: the fiber is of natural origin and the manufacturing process involves almost total recycling of the solvent used.

BAYSCENT® ALOE

Bayscent® Aloe®: The microcapsules contain essence of Aloe Vera, which offers extraordinarily beneficial virtues (anti-inflammation and antioxidant).

LYOCELL FIBER

Lyocell Fiber is an innovative fabric of completely natural origin. The fabric is sterilized and totally free of mold, bacteria and mites. It is also antiallergic because the Medic+Area treatment makes no use of synthetic chemicals but only natural products for a high level of hygiene.

The Outlast® technology was originally developed on behalf of NASA to allow astronauts to stay for long periods in space. Today, Outlast® has received the “Certified Space Technology®” award because it contributes to improving the comfort of thousands of people. This fabric balances temperature oscillations, absorbing excess heat and releasing it just when necessary. The result is that it maintains a steady temperature, which reduces transpiration. Adapting to the microclimate of the skin, Outlast® prevents overheating and unpleasant sensations of cold and shivering, thus providing a 100% guarantee of the finest sleep to be had.

Microcapsules containing aloe vera essence, known since antiquity for its numerous beneficial properties (anti-inflammatory and anti-oxidant), are inserted into the material fibres during manufacturing. Upon contact with the skin or with a simple movement, these microcapsules release the beneficial essence of the substance they contain, which in turn has a positive influence on some of the body's important functions, resulting in deep relaxation and a sense of well-being.

A highly elastic, durable, crease and pilling resistant fabric is obtained from the bamboo plant that maintains its characteristics even after many washings. The hollow structure of bamboo fiber also gives the fabric excellent breathability, control of bodily humidity and conservation of warmth, which results in a sensation of freshness and relaxation especially during the warm seasons. The bamboo fiber is also permeated with honey pectin, which is rich in emollient and nutrient properties for skin cells.

This fabric, with extraordinary breathability, is used mainly for the border strips on the mattresses to guarantee the greatest aeration and a constant flow of air. This eliminates 100% of all forms of humidity that might stagnate inside the mattress to ensure healthier and more relaxing rest.

Soft as silk. This fabric is made of a special viscose fiber which is completely biodegradable. It looks like silk with a retention of rich, vibrant colors. The Soft Care is extremely pleasant, soft and comfortable and gives you an extraordinary feeling of freshness and well-being. It absorbs moisture, is breathable and wear resistant.

Probiotic is a treatment that reduces allergies and asthma in an absolutely natural way. Probiotic keeps the bed clean and hygienic through the use of active probiotics, which inhibit mold and noxious bacteria, and clean mites of their allergens. This technology based on double patents is 100% biological and natural, perfect to ensure truly refreshing sleep. The probiotic microfauna is incorporated in the fabric in the form of spores in microcapsules. They remain dormant until activated by the friction of the body against the mattress.

This technology, based on nanotechnology, uses Nanotex® particles to transform the molecular structure of fibers and create fabrics that offer superior performance and comfort. The treatment becomes a fundamental part of the fabric. Thousands of particles are anchored deep in the fibers of the fabric, keeping the molecules of soil at a distance. Longer lasting than traditional treatments, this treatment maintains the comfort, the feel and the breathability of the fabric. Liquids such as wine, cola and coffee, which cause stains when they penetrate fibers, form a drop and roll away without being absorbed. With Nanotex® fabric, bodily transpiration is absorbed by the sheets, which are washed frequently, and not by the mattress.

Silver, the most efficient antimicrobial agent and the one with the highest value of electrical conductivity, quickly dissipates the irritating charges of static electricity. The silver thread is permanently bonded to a polymer to guarantee the duration of its antimicrobial function over time. Its radiant and reflective properties regulate bodily temperature. These functions resist permanently, even after many washing cycles.

Medic+Area® is a highly innovative production process that achieves surprising results in the treatment against mold and bacteria. The final result is an absolutely sterile fabric that is totally free of mold, bacteria and moths. The fabric obtained is also antiallergic and very hygienic because the Medic+Area® treatment makes no use of synthetic chemical products, but only natural products.

Stretch is a knit fabric composed of 100% antiallergic fiber, the ideal antibacterial hygienic fabric. Most applications are for a removable mattress cover because it is so easy to wash and has an attractive sheen.

MATERIALS

Visco Mind® HD is a self-modelling material with a high-density elastic memory (approx. 95 kg/m³). The molecules of the material are packed in tightly and amalgamated to guarantee a greater adherence of the body to the mattress and further reduces misplaced points of pressure. High-density provides a valid remedy to the various pathologies (backache and neck pain) that are caused by poor rest during the night.

Visco Mind® is a medium-density (approx. 50 kg/m³) self-modelling CFC-free material emulsified with water that has an elastic memory. This viscoelastic foam has outstanding ergonomic qualities and adapts to body contours by slow distension without exercising any resistance. It sustains the backbone properly, is antibacterial and antiallergic.

This is a new material. Flexible polyurethane foam is mixed with special microcapsules called PCM (Phase Change Materials), which absorb the heat radiated by the human body and maintain a steady temperature inside the material. In this way, the polyurethane acquires the extraordinary capacity to remain cool and avoid the typical temperature rise due to human presence for a prolonged period of time. The PCM represent the cutting-edge in the evolution of polyurethane performance. Initially utilized by NASA in the aerospace ambit, they are now the ideal application when it is necessary to unite flexibility, breathability and control of thermal exchange. In addition, the presence of silver salts in the composition of the material means that the new polyurethane is antibacterial, mold resistant and conserves excellent hygienic conditions over time.

This particular material offers superior technical performance. It enhances the mattress with an extra soft touch and a special enveloping effect during rest. It is recommended for all those who love the sensation of a soft product that adapts perfectly to the contours of their bodies while maintaining the natural firmness of the mattress.

Waterfoam is a CFC-free polyurethane water foam that facilitates distribution of body weight and induces relaxation of the muscular mass. It is available in many different densities and degrees of firmness to meet personalized rest and comfort requirements.

Bio Foam Soya HR (High Resilience) is composed of a mixture of extracts of untreated natural soya oils and represents a perfect symbiosis of modernity and nature. Soya oil has all the hygienic and beneficial characteristics to produce a material with a particular elasticity that transmits a sensation of coolness, adequate moisturization and well-being during sleep. Bio Foam Soya HR has a low level of environmental impact because it is produced without the use of damaging and uncontrollable foaming agents and because natural ingredients substitute a part of the synthetic products.

This extraordinary material adapts to the weight, pressure and temperature of the body, offering unequalled comfort. It is enriched with natural products only, such as essential oils, that have been studied expressly to favor sleep and reduce stress. Bio Visco Mind® has a low level of environmental impact because it is produced without the use of damaging and uncontrollable foaming agents and because natural ingredients substitute a part of the synthetic products.

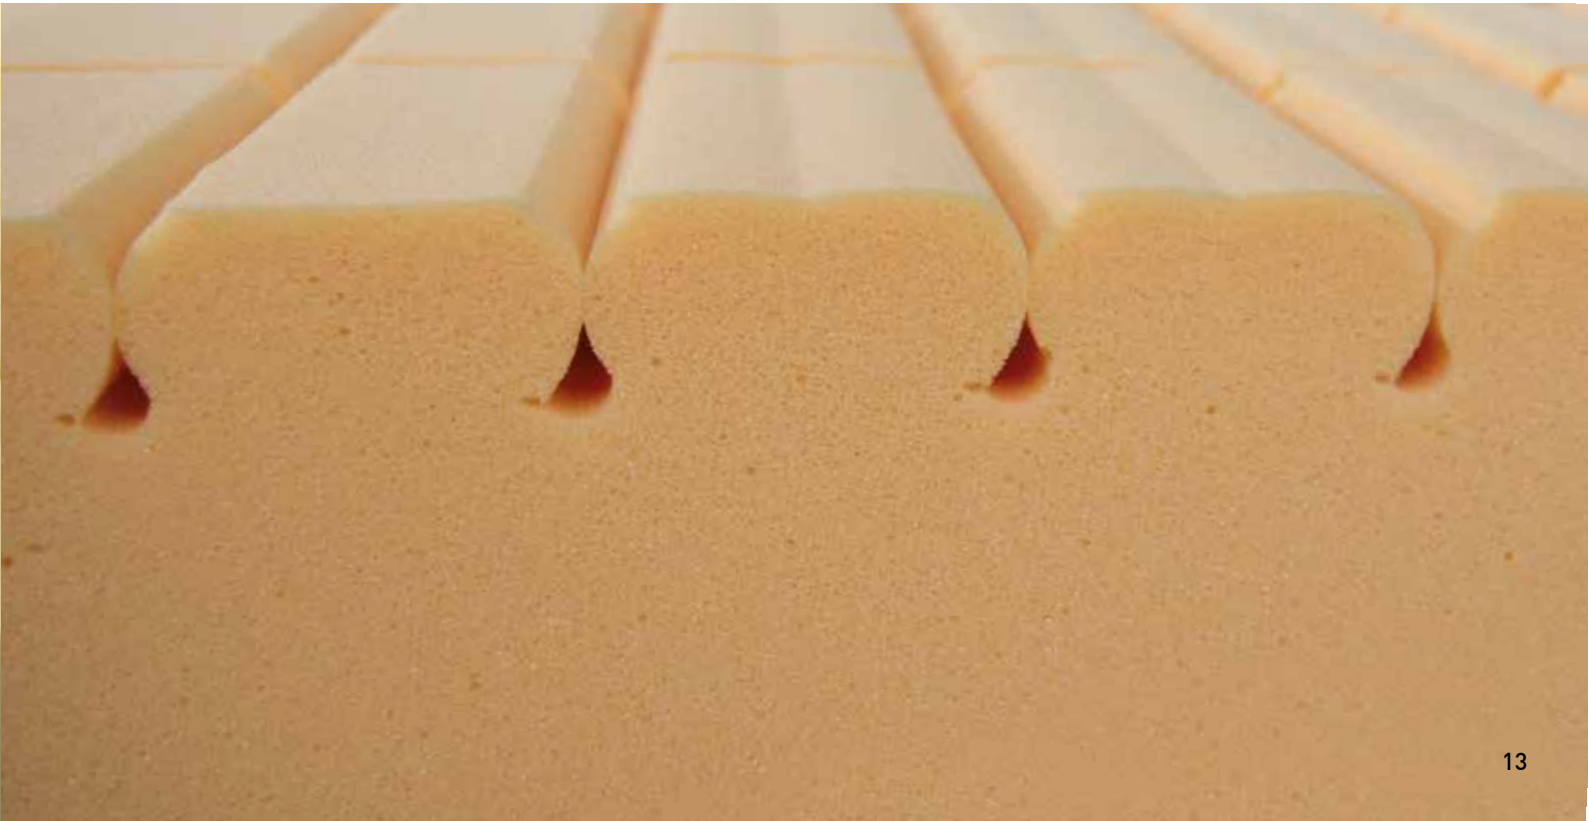

Bio Waterfoam is a polyurethane foam composed of water and raw materials derived from renewable sources such as essential oils studied expressly to favor sleep and reduce stress. It is a valuable energy resource for the body, the mind and the spirit. Bio Waterfoam has a low level of environmental impact because it is produced without the use of damaging and uncontrollable foaming agents and because natural ingredients substitute a part of the synthetic products.

Sea Foam is an innovative material derived from the evolution of natural sea sponges and produced artificially with synthetic materials. The well-known features of the sea sponge have been implemented, perfected and improved by means of an innovative foaming process that creates a product with an exclusive capacity for breathability. The large full-thickness cells, which are about ten times the size of those in normal polyurethane foam, allow for circulation, but above all, storage of air that is released in contact with the body, maintaining a low, controlled humidity level in the mattress. This characteristic also produces an excellent firmness effect because the air inside the material functions like a series of small cushions that adapt perfectly to all weights and body contours.

Normal Visco Mind® is perforated with a series of ventilation holes that greatly increase air circulation and reduce humidity for perfect breathability of the mattress and absolute comfort.

SoftGel® is a completely non-toxic polyurethane material that does not harden or age, maintaining its elastic properties over time. Its essential quality is its capacity to distribute the weight of the body. When subjected to the weight of a body, it tends to adapt to the shape of the body itself. A fundamental component of good rest is control of the body temperature and SoftGel® is ideal for nocturnal rest because of its low thermal conduction index. It takes about three hours for it to register a significant temperature rise, after which it levels off to a steady temperature a few degrees lower than the body temperature. This favors blood circulation, oxygenation of tissues and produces a pleasantly fresh sensation.

100% LATEX FOAM

Latex is a substance extracted from the Hevea Brasiliensis plant by cutting the bark to tap the milky fluid that it exudes. Latex foam derives from the vulcanization of the milky fluid. According to numerous studies, this material can resolve many allergic problems that are becoming more common every day. The natural elasticity of latex allows it to adjust, point by point, to any position of the body so as to sustain it with evident orthopedic advantages.

CLIMATEX®

Luxurious comfort, Climalatex® Technology is combining the advantages of the Dunlopp process (durability) with the Talalay process (air ventilation), resulting in:

- Optimal orthopaedic body support.
- Reduces high pressure points that shut off blood flow.
- Anti-bacterial, dust-mite resistant.
- High resistance and uniformity.
- Superior self-ventilation and moisture regulating due to open cell structure and thousands of perforations.

POCKET SPRINGS

These mattresses are fitted with many springs, each one individually sealed in its pocket. This allows each spring to work independently of all the others and to adapt perfectly to each separate part of the body. Support is differentiated in 7 zones of firmness by using steel wires of varying diameters. Available in both the micro-spring version (over 1500 springs in the double bed mattress) and the normal version (about 900 springs in the double bed mattress).

BONNEL SPRINGS

Bonnell steel springs are known for offering traditional comfort. Each bi-conical spring is made of a patented phosphatized steel wire. A tempering treatment makes the springs resistant to deformation. They are assembled with a spiral to unite them perfectly and ensure that the springs work together.

PADDING

CLIMA FRESH®

The use of Clima Fresh® in padding offers thermal comfort that is obtained by the addition of special microcapsules called PCM (Phase Change Materials), which absorb the heat radiated by the human body and maintain a steady temperature inside the material. Thus, the polyurethane remains cool and breathable in contact with the human body. It also offers hygienic comfort because it maintains the high hygienic qualities and the breathability of the polyurethane foam over time. By relying on the natural quality of silver to inhibit bacterial proliferation, one of the primary causes of asthma, allergies and mold, it is possible to reduce mold and bacterial proliferation by over 95%.

VISCO MIND®

Visco Mind® padding is a self-modelling CFC-free material emulsified with water that has an elastic memory. This viscoelastic foam has outstanding ergonomic qualities and adapts to body contours by slow distension without exercising any resistance. It sustains the backbone properly, is antibacterial and antiallergic.

EXTRA SOFT FOAM

The performance of this particular material is technically superior to normal padding. In fact, it provides an extra soft effect because it is ten times softer than traditional padding. The special enveloping effect it provides during rest enhances the mattress. It is recommended for all those who love the sensation of a soft product that adapts perfectly to the contours of their bodies, while maintaining the natural firmness of the mattress.

100%
ANTIALLERGIC
FIBER

Use of antiallergic fiber in padding has various positive qualities for healthy and comfortable sleeping. Mold-proof and impregnable to micro-organisms of all types, antiallergic padding offers excellent performance and is a great ally for the well-being of a good night's sleep. It is also machine washable.

CAMEL WOOL

Thinness and softness make camel wool an excellent thermal insulation, capable of incorporating a mass of heated air that restricts thermal exchange and makes it the ideal padding for the winter season. It is significantly hygroscopic, more so than sheep's wool, so that it provides a dry microclimate, which is favorable to rest.

LINEN FIBER

Linen fiber is obtained from the stem of Linum Usitatissimum. This is an annual herbaceous plant cultivated primarily in the cool temperate regions of northern Europe. As a good thermal conductor, linen fiber is probably the most adapt padding for the summer side of the mattress for the cool sensation it offers in contact with the skin. In addition, its molecular structure allows it to absorb up to 20% of its weight in humidity.

COTTON WOOL

The natural properties of cotton padding make it possible to achieve perfectly relaxing comfort even in the hottest seasons. The natural properties of wool padding make possible to achieve and maintain the right degree of warmth in the coldest period.

ERGO AIIR TECHNOLOGY

BREATHABLE, ELASTIC AND HIGHLY ERGONOMIC:
THESE ARE THE CHARACTERISTICS OF THE INNOVATIVE ERGO AIIR LAYER

BREATHABLE:

A product unique in its kind that provides maximum comfort and breathability, reduces humidity and offers a pleasant feeling of freshness.

VERY COMFORTABLE:

With the new ERGO AIIR plate, two levels of elasticity are present: the traditional one, offered by the foam typical density and carrying capacity, and the mechanical one, offered by plates stretching. A "sprung feel with no springs".

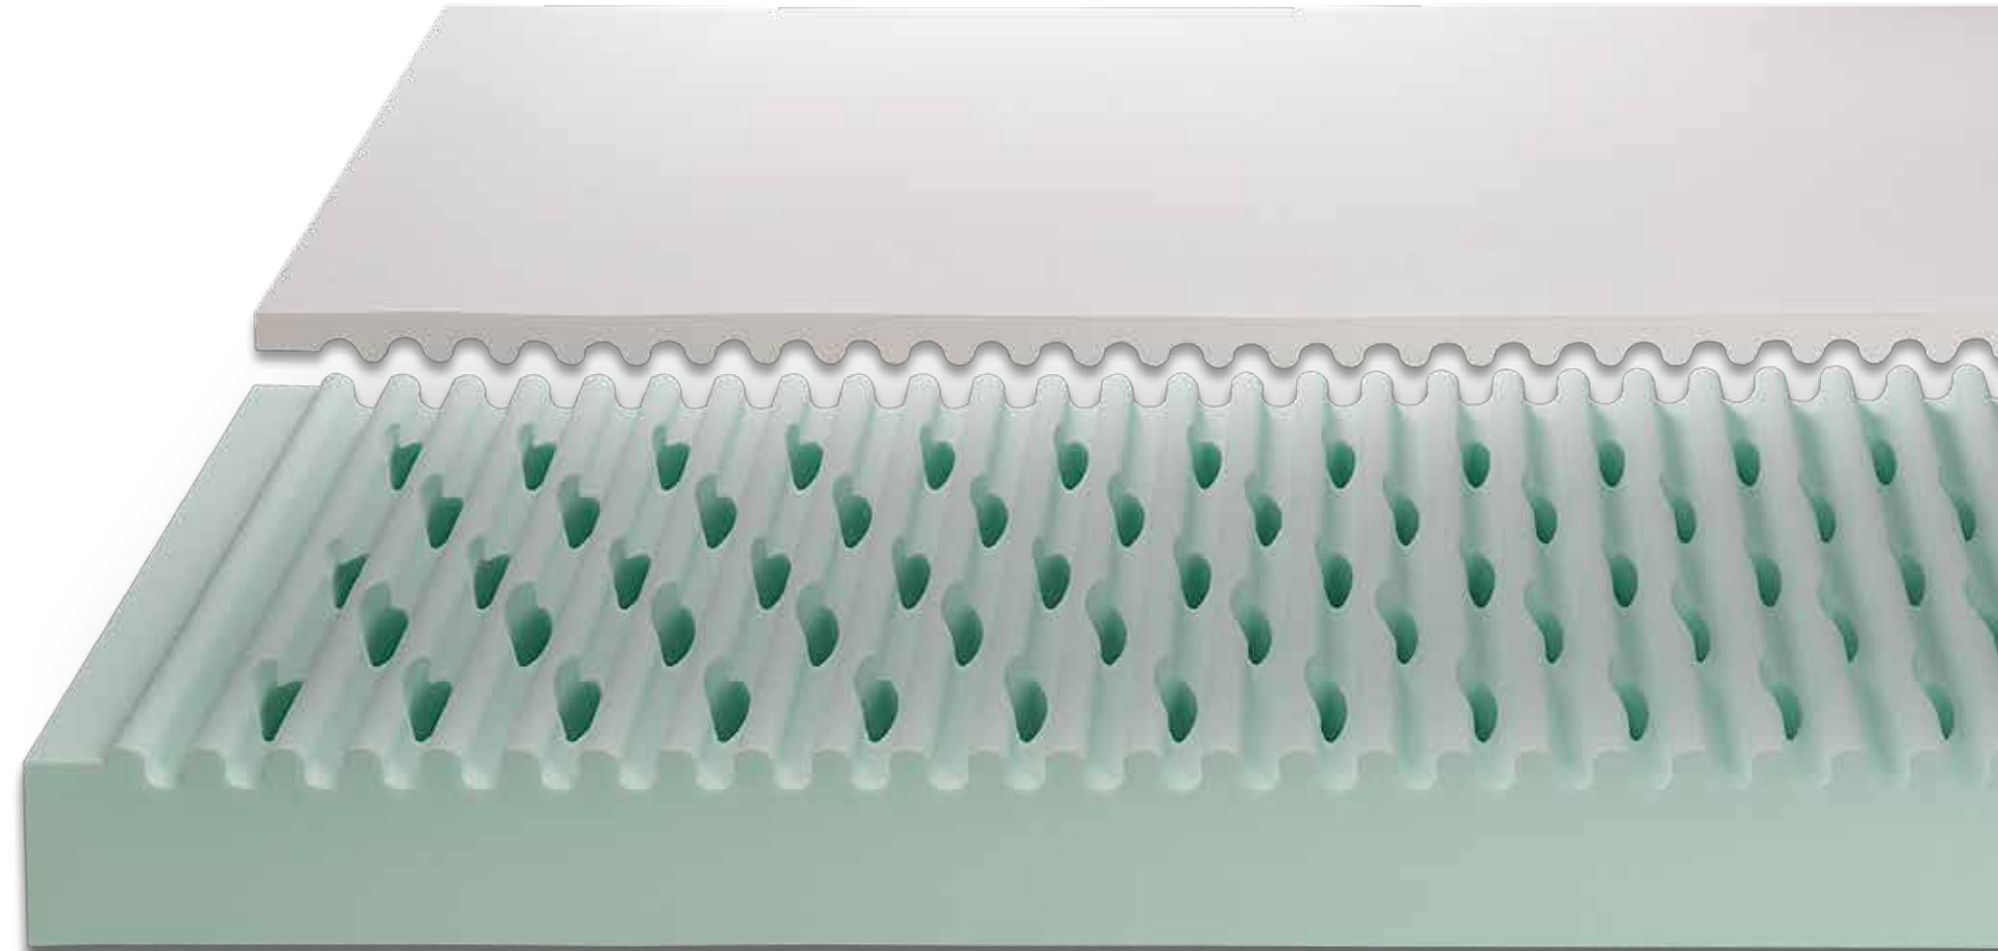

ELASTIC:

The special manufacturing of ERGO AIIR layer:

- Renders the product extremely flexible and elastic
- Provides exceptional ergonomic support
- Supports body weight in the proper and optimal manner

ERGONOMIC:

Thanks to the unique manufacturing with alveolar system, ERGO AIIR layering is not only able to correctly support body weight, but also perfectly contours with the support frame. Ideal for frames with raised head/foot functions, as it allows for selecting the preferred position (cervical, back, femoral), while preventing the ERGO AIIR from being altered when bent. It maintains the layer's thickness, thus ensuring optimum rest.

PREMIUM LINE

PILLOWS & ACCESSORIES

DUAL

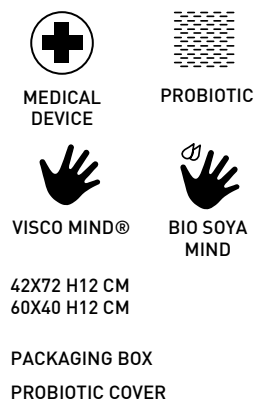

DUAL NATURA

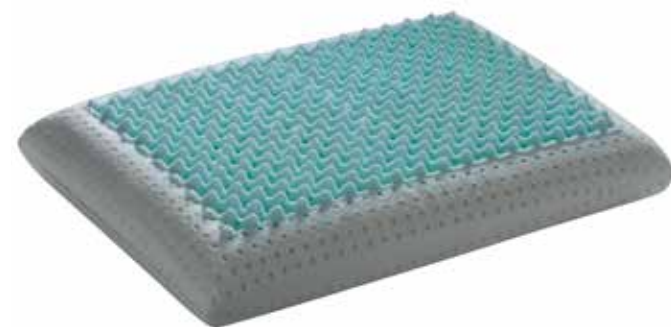

The visco-elastic memory pillow combined with a special orange Bio Soya Mind insert, is a revolutionary material that can adapt to weight and pressure offering an extraordinary comfort and a continuous air circulation for a maximum breathability.

Dual Natura pillow is covered with a knitted Probiotic fabric which uses active probiotic technology to inhibit the growth of bacteria and clean mite allergens.

A concentration of technology that, while resting, helps to find harmony. Its ability to adapt to the head and neck, returning to its natural shape, without providing wrong points of pressure, guarantees an optimal rest.

DUAL CLIMA

The visco-elastic memory pillow combined with a special Climafresh® insert, is a revolutionary material that can adapt to weight and pressure offering an extraordinary comfort and provides a continuous temperature control and gives you a long and pleasant feeling of freshness. Dual Clima pillow is covered with a knitted Probiotic fabric which uses active probiotic technology to inhibit the growth of bacteria and clean mite allergens.

Climafresh® is an innovative material which, thanks to the special Ultra Fresh treatment, absorbs heat from the human body taking on the capacity to keep cool and avoid the typical heating during rest.

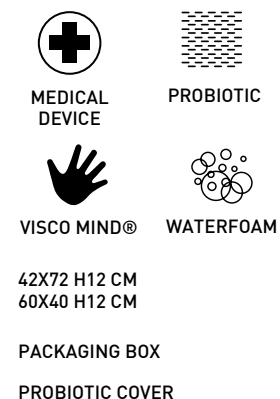

DUAL

DUAL DRY MASSAGE

The visco-elastic memory pillow combined with a special beige waterfoam insert, is a revolutionary material that can adapt to weight and pressure offering an extraordinary comfort and gives you a long and pleasant feeling of freshness thanks to the special breathable cellular structure.

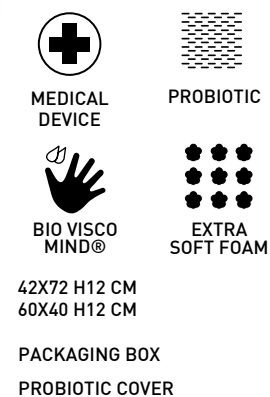

Dual Dry Massage pillow is covered with a knitted Probiotic fabric which uses active probiotic technology to inhibit the growth of bacteria and clean mite allergens.

BIO DOUBLE

Two sided pillow for a unique comfort. One side in Bio Memory, a material that can adapt to weight and pressure, able to self-regulate and self-shape for a new way to sleep. The other side in Extra Soft Foam, a very tough material but at the same time very flexible and soft. It gives you a long and pleasant feeling of freshness thanks to the special breathable structure.

SOYA

Innovative product based on a perfect union between technology and nature. Made using a special visco-Elastic Foam which adapts perfectly to the head and neck without offering contrary pressure, combined with a precious Soy-based material, which gives a pleasant softness and favours in a natural way the skin elasticity and hydration.

BIO MEMORY

The visco-elastic bio memory is a material that can adapt to weight and pressure offering a unique comfort. These characteristics of total adaptability make it a leading-edge product, able to self-regulate and self-shape for a new way to sleep. A concentration of technology that, while resting, helps to find harmony. Its ability to adapt to the head and neck, returning to its natural shape, without providing wrong pressure points, guarantees an optimal rest. This product is enriched with natural elements such as essential oils specifically used to assist sleep. Bio memory has a low environmental impact because it is produced without the use of uncontrolled foaming agents since it replaces part of synthetic products with natural products. It is also anti-mite and non-allergenic.

TRAVEL PILLOWS

FOR A PERFECT TRAVELING EXPERIENCE

- An extraordinary feeling of comfort
- Pillow in viscoelastic material
- Helps release neck and shoulder tensions
- Promote relaxation of muscles
- Self-modeling and heat sensitive
- Removable zippered washable lining

Use: helpful to relieve pains, headaches and tensions as well as to improve the cervical spine, perfect anatomical fit.

30X30 H 10 CM

IDEAL FOR CERVICAL

- An extraordinary feeling of comfort
- Pillow in viscoelastic material
- Helps release neck and shoulder tensions
- Promotes muscle relaxation
- Self-modeling and heat sensitive
- Removable zippered washable lining

Use: helpful to relieve pains, headaches and tensions as well as to improve the cervical spine, perfect anatomical fit.

50X30 H 10/8 CM

RELAXING

- An extraordinary feeling of comfort
- Pillow in viscoelastic material
- Supports the cervical columns in the rest position
- Promotes muscle relaxation
- Self-modeling and heat sensitive
- Removable zippered washable lining

Use: helpful to support neck and head to prevent the formication caused by poor posture.

42X24 H 12 CM

TRAVEL PILLOWS

MULTI USE

- An extraordinary feeling of comfort
- Several modes of use: as a lumbar support pillow behind the back
- Under the knees to slightly lift your legs
- Under the heels to prevent sores and heel inflammation
- Self-modeling and heat sensitive

Use: ideal for the well-being of the lumbar spine, neck and legs.

38X20 H 11 CM

IDEAL FOR COLUMN LUMBAR

- An extraordinary feeling of comfort
- Perfect anatomical adaptation
- A pleasant relaxing effect
- Self-modeling and heat sensitive
- Guaranteed relaxation of the lumbar muscles
- Helps to improve blood circulation
- Removable zippered washable lining
- Therapeutic Wellness

Use: perfect for a better seating and in particular as anti-decubitus pillow for wheelchair users.

38X35 H 9 CM

LUNE

- An extraordinary feeling of comfort
- Pillow in viscoelastic material
- Promotes muscle relaxation
- Self-modeling and heat sensitive
- Removable zippered washable lining

Use: ideal to ease tensions and improve the cervical spine as well aches and headaches, perfect anatomical fit.

30% small
goose feathers

PIUMA BASIC

The composition of this pillow – 15% down and 85% small feathers – offers consistent support, while maintaining a degree of softness contributed by the down. The effect is agreeable and offers sufficient support to satisfy those who do not wish to sink too deeply into the pillow and an ideal position during sleep for those who want to feel a little resistance under the head.
